

VAELORYN

PRODUCT DOCUMENTATION

VAELO Ecosystem & Product Overview

VERSION 1.0

August 2026

Prepared for a Fjord Foundry partnered public-sale application.

Canonical Base Mainnet deployment: NOT DEPLOYED

DOCUMENT MAP

Contents

This product overview distinguishes implemented preparation from planned ecosystem and sale functionality.

16 Transparency and verification

17 Risks and limitations

18 Contact and links

Important status statement. The canonical VAELO protocol is implemented and internally tested, but has not been deployed on Base Mainnet. No Fjord sale has been created, approved, funded or launched.

Executive overview

CURRENT STAGE — FOUNDATION / PRE-DEPLOYMENT

Vaeloryn is being developed as a long-term ecosystem intended to connect capital, expertise, technology and opportunity around projects capable of contributing to meaningful advances in science, medicine, energy and frontier technology.

The ambition is to create infrastructure through which resources can be coordinated toward real-world scientific and technological development. The canonical protocol is implemented and tested locally, but the broader ecosystem is not yet fully operational. Base Mainnet deployment, independent security review, the Fjord sale and full ecosystem launch remain incomplete.

The problem

PROBLEM STATEMENT — NOT A CLAIM OF RESOLUTION

Promising scientific and technological initiatives can struggle to move from idea to implementation because required resources are fragmented. A coordinated ecosystem could potentially shorten this path by bringing complementary inputs together, while preserving project-specific diligence and execution discipline.

- Capital
- Specialist expertise
- Technical and physical infrastructure
- Professional networks
- Development resources
- Long-term support

The Vaeloryn vision

LONG-TERM VISION — PLANNED

Vaeloryn's long-term vision is to help coordinate the inputs required to move credible ideas toward measurable real-world development.

Capital + Expertise + Technology + Execution →
Real-world innovation

Intended areas of focus include medical science, energy, artificial intelligence, computing, aerospace, engineering, fundamental science and other frontier technologies. These are areas of interest, not claims that Vaeloryn currently operates projects in every field.

The Vaeloryn ecosystem

PLANNED ECOSYSTEM ARCHITECTURE

Participants may contribute capital, expertise, ideas, technology or execution capability. The intended VAELO ecosystem would coordinate appropriate forms of participation around selected initiatives.

Initiatives would still require independent evaluation, development, governance, compliance and execution. Real-world outcomes are an objective, not a guaranteed result. Successful work could expand the ecosystem’s future capacity.

Current state: the token protocol, documentation and preparation materials exist; operational products, selected flagship initiatives and a fully functioning participant network remain in development.

VAELO token

IMPLEMENTED LOCALLY — NOT DEPLOYED ON BASE MAINNET

VAELO is the fixed-supply token designed for the intended Vaeloryn ecosystem. The target network is Base Mainnet. The canonical deployment package has been prepared, but the canonical token has not been deployed.

Currently implemented functionality: ERC-20 transfers and allowances; ERC20Burnable burn and burnFrom; ERC20Permit / EIP-2612 Permit; EIP-712 typed-data support; and nonce tracking.

The canonical token has no additional mint function, owner or administrator, upgrade mechanism, pause function, blacklist or transfer tax. These design properties do not imply utility, market value or returns.

TOKEN VAELO	FIXED SUPPLY 1,000,000,000 VAELO
TARGET NETWORK Base Mainnet	STANDARD ERC-20
MAINNET STATUS NOT DEPLOYED	

Product and token utility

PLANNED — NOT CURRENT FUNCTIONALITY

Potential future roles may include ecosystem participation, coordination, appropriate access to ecosystem initiatives, support for ecosystem funding mechanisms, participation in future products or services, and interactions among ecosystem participants.

No specific application, staking mechanism, governance system, payment system, revenue-sharing mechanism or current product access is represented as operational. Utility should follow useful products and approved operating models, rather than precede them.

Tokenomics

FINALIZED CANONICAL ALLOCATION

The complete fixed supply is 1,000,000,000 VAELO. The six allocations total exactly 100% and are created as one canonical genesis distribution.

Allocation	VAELO	Share
Ecosystem & Community	300,000,000	30%
Public Distribution	200,000,000	20%
Vaeloryn Treasury	200,000,000	20%
Team & Contributors	150,000,000	15%
Founder	100,000,000	10%
Strategic Partnerships	50,000,000	5%
TOTAL	1,000,000,000	100%

Founder vesting

IMPLEMENTED CANONICAL SCHEDULE

The founder allocation is 100,000,000 VAELO. Token, beneficiary, start time, linear start and linear end are immutable in the canonical implementation. There is no fourth quarterly release.

Event	Timing	Additional release	Cumulative
Initial	T0	2,500,000	2,500,000
Quarter 1	T0 + 90 days	2,500,000	5,000,000
Quarter 2	T0 + 180 days	2,500,000	7,500,000
Quarter 3	T0 + 270 days	2,500,000	10,000,000
Linear phase	From T0 + 270 days for exactly 1,095 days	90,000,000 linearly	100,000,000

Technical architecture

IMPLEMENTED LOCALLY — DEPLOYMENT PENDING

VaelorynDeploymentFactory is a constructor-only, one-shot factory that deploys the distribution, token and founder vesting contracts and completes allocation in the same transaction.

VaelorynGenesisDistribution receives the complete supply directly from the token and performs the one-time six-category allocation. VaelorynToken creates the fixed supply once and includes ERC-20, Burnable and Permit functionality. VaelorynFounderVesting enforces the founder schedule and allocation cap.

The atomic sequence reduces substitution risk between token creation, vesting creation and allocation. It does not mean that a Base Mainnet deployment has occurred.

ATOMIC CANONICAL DEPLOYMENT DESIGN

Conceptual architecture — planned ecosystem; not evidence of operational products or projects.

Security and testing

INTERNAL VERIFICATION COMPLETE — INDEPENDENT AUDIT NOT COMPLETED

The targeted canonical hardening run recorded 27 tests passed, 0 failed and 0 skipped: 25 canonical unit, edge-case, Permit, allocation, vesting, fuzz and factory tests, plus two invariant suites.

Each fuzz target ran 256 times. Each invariant ran 128 times with 8,192 handler calls, for 16,384 invariant handler calls in total.

These are internal development and verification tests and do not constitute an independent security audit. Independent security audit: NOT YET COMPLETED.

Treasury and allocation structure

APPROVED INTENDED RECIPIENT — NO TRANSFER HAS OCCURRED

The canonical design sends the Vaeloryn Treasury allocation through the one-time genesis distribution to the approved Treasury Safe. The intended use of a Safe supports shared custody and operational controls outside the immutable token contract.

Approved Treasury Safe: 0x3A9bee20360294F8439513Ae70D189f56288baF2

The manifest is marked NOT_DEPLOYED. No canonical VAELO has been transferred to this or any other Mainnet recipient.

Initial public sale

PROPOSED / WORKING PARAMETERS — SUBJECT TO FINAL FJORD CONFIGURATION

The working concept is a tiered sale on Base using no more than 10,000,000 VAELO, equal to 1% of total supply and carved from the existing Public Distribution allocation. It is not an additional allocation.

The \$5,000,000 target reference FDV and \$0.005 reference price are planning references, not guaranteed valuations. The sale has not been created, approved, funded or launched.

NETWORK Base	SALE TYPE Tiered
MAXIMUM ALLOCATION 10,000,000 VAELO / 1%	REFERENCE FDV \$5,000,000
REFERENCE PRICE \$0.005	MAXIMUM THEORETICAL GROSS PROCEEDS \$50,000

Tier	VAELO	Price	Gross proceeds
1	1,000,000	\$0.003	\$3,000
2	2,000,000	\$0.004	\$8,000
3	3,000,000	\$0.005	\$15,000
4	4,000,000	\$0.006	\$24,000
MAXIMUM	10,000,000	Weighted avg. \$0.005	\$50,000

Use of initial capital

INTENDED USES — NOT COMPLETED ACTIVITIES

If an approved sale proceeds, potential uses of initial project funding may include the following. Final budgets, timing and allocations remain subject to approval and available proceeds.

- Technical development
- Independent security review
- Infrastructure
- Essential team capability
- Legal and compliance work
- Corporate and operational setup
- Development of the first Vaeloryn initiative
- Communications and transparency infrastructure

Roadmap

MILESTONE-GATED — NO DATES PROMISED

Progression is milestone-gated rather than calendar-gated. Future phases are objectives, not commitments to specific timing or outcomes.

Phase	Status	Representative milestones
Phase 1 — Foundation	IN PROGRESS	Canonical protocol implemented and tested; website and public documentation established. Community, legal/regulatory guidance, strategy and flagship-project evaluation remain in progress.
Phase 2 — Execution	PLANNED	Build a first flagship project; demonstrate measurable value; grow capability; introduce genuine VAELO utility only where useful.
Phase 3 — Expansion	PLANNED	Expand successful projects; develop additional initiatives; build partnerships; expand the contributor ecosystem; strengthen sustainability.
Phase 4 — Global Ecosystem	PLANNED	Develop a globally connected innovation ecosystem around meaningful science and technology projects.

Current development status

STATUS AS OF AUGUST 2026

The project is at a foundation and preparation stage. The protocol work described below is local implementation and evidence, not a claim of Mainnet launch.

CURRENT / PREPARED	NOT YET COMPLETED
Canonical contracts implemented	Base Mainnet deployment
Canonical tokenomics finalized	Mainnet source verification
Targeted canonical test suite passing	Independent security audit
Mainnet deployment package prepared	Fjord sale creation and approval
Fjord preparation documentation prepared	Public token sale
Fjord pitch deck prepared	Full ecosystem launch

Transparency and verification

FUTURE MAINNET VERIFICATION REQUIREMENTS

Canonical identity should be established through the approved Base Mainnet manifest, deployment event and verifiable on-chain evidence—not through a name or placeholder address.

Future publication should include the official VAELO, factory, genesis distribution and founder vesting addresses; deployment transaction; verified source code; compiler and constructor settings; bytecode hashes; tokenomics readback; and vesting readback.

No canonical Mainnet addresses or transaction identifiers exist in the manifest today, so none are inserted here.

Risks and limitations

MATERIAL UNCERTAINTIES

Vaeloryn is early-stage. Development may be delayed, changed or discontinued. Smart contracts can contain defects despite testing, and an independent audit has not been completed.

Market demand, liquidity and token pricing are uncertain. Regulatory requirements may change or differ across jurisdictions. Adoption depends on participants, useful initiatives and execution capability. Sale operations, eligibility, payment assets, claims and unsold-token treatment require external Fjord confirmation and professional review.

VAELO does not guarantee returns. This document is informational and is not legal, tax, regulatory, financial or investment advice.
